Objective

A highly skilled Mobile and Backend Developer with a strong foundation in Flutter and API development, seeking to leverage my expertise in building innovative applications and solving complex problems. Eager to contribute to a dynamic team and drive success through technical excellence and effective collaboration.

Experience

- **PayRecon** 01-08-2023 - Present
  Software Engineer
  Designed and built the SmartScan App, an e-commerce fulfillment solution for Lazada and Shopee sellers. Integrated scanning, packaging proof (image and video), stock-taking, and returns management using Flutter, APIs, and Firebase.

  Developed the Warehouse Management App, streamlining the packing and unpacking processes for warehouse operations. The app automatically assigns products to batches and supports multiple user roles (e.g., weight users, checkers, managers). Utilized Flutter, REST APIs, and Firebase to manage data and improve workflow efficiency.

- **PayRecon** 01-04-2023 - 31-07-2023
  Internship
  Developed the Bossy App, a business analytics dashboard providing reports on marketplace performance, including order, sales, and item data. Used Flutter for the mobile app and developed APIs to power real-time reporting and data visualizations.

  Enhanced the SmartPos Application by adding new features like customer membership management, draft and void sales, and API integrations for smoother online/offline functionality.

- **Palace Hotel** 01-01-2019 - 30-04-2019
  Front Desk Officer
  Worked as front Desk officer

Education

- **University of Selangor** 2020 - 2023
  Bachelors in Computer Science(Hons)
  3.76

- **University of Selangor** 2019 - 2020
  Foundation in Information Technology
  3.83

- **SMK Raja Ali** 2014 - 2019
  High School
  3A, 3B+

Skills

- Problem Solving: Adept at identifying issues and implementing effective solutions, whether in app development, backend integration, or system workflows.
- Communication: Fluent in Chinese, English, Malay, and Tamil, allowing for smooth communication with diverse teams and clients.
- Team Collaboration: Proven ability to work with cross-functional teams, including designers, backend developers, and product managers, ensuring smooth project execution.
- Adaptability: Flexible in adapting to new technologies, frameworks, and client requirements, delivering solutions that meet both technical and business needs.
- Attention to Detail: Strong focus on quality and precision, ensuring that applications are user-friendly, efficient,

and bug-free.
- Critical Thinking: Ability to analyze complex issues, foresee potential problems, and design solutions to enhance app functionality and user experience.

Projects

- **SmartPos application**
  Developed a feature-rich Point of Sales (POS) application built in Flutter. This app works both online and offline, enabling users to add/edit products, print receipts, manage draft and void sales, and handle customer memberships. Integrated functionality for customers to redeem points. The app ensures efficient operations for retail businesses.
- **SmartScan application**
  Created the PayRecon SmartScan app designed to minimize mistakes in order fulfillment for e-commerce platforms like Lazada and Shopee. It allows sellers to scan items before shipping, reducing errors such as overdelivering or sending incorrect items. Users can scan tracking numbers to capture and send images or videos as proof of packaging. The app also supports stock taking, managing returns, and generating manifests. Built using Flutter, APIs, and Firebase to store marketplace data.
- **Bossy application**
  Developed a comprehensive business analytics and reporting dashboard for marketplace sellers. This app offers detailed reports on orders, sales, and item performance, helping businesses analyze trends over customizable date ranges. Key features include marketplace order reports, sales analysis, item-specific data, and interactive data visualizations. Built using Flutter and integrated APIs for real-time data.
- **Warehouse Management App**
  Warehouse Management App: Developed a comprehensive warehouse management solution to streamline inbound processes. The app allows users to create items, products, and batches for their packing and unpacking processes. It automatically assigns products to batches, simplifying the workflow without manual selection. The app also supports multiple user roles such as weight users, first checkers, second checkers, and managers. Built with Flutter, integrated APIs, and Firebase, this app is designed for warehouses to efficiently manage operations before the inbound process.

Achievements & Awards

- First Class Honours: Graduated with a First Class Honours degree, reflecting outstanding academic performance and mastery of my field of study.
- Dean's List: Achieved Dean’s List recognition for all semesters during my degree, showcasing consistent academic excellence and dedication.
